## What is claimed is:

- 1. A methanol reforming catalyst, comprising:
- a metal oxide support; and

Pd-Zn alloy that is impregnated in the metal oxide support.

- 2. The methanol reforming catalyst according to claim 1, wherein the metal oxide contains Ce oxide or Zr oxide.
- 3. The methanol reforming catalyst according to claim 1, wherein the metal oxide contains Ce-Zr complex oxide.
- 4. The methanol reforming catalyst according to claim 1, wherein a weight ratio of Pd and Zn in the Pd-Zn alloy is 1:1 to 1:50.
  - 5. A methanol reforming catalyst, comprising:

at least one type catalyst component selected from the group consisting of Pd-Zn-Ce based compound, Pd-Zn-Zr based compound, and Pd-Zn-Ce-Zr based compound.

6. A method of producing the methanol reforming catalyst set forth in claim 1, comprising

impregrating a metal oxide with a solution containing Pd and Zn; and burning the metal oxide that is impregnated with Pd and Zn.

7. A method of producing the methanol reforming catalyst set forth in claim5, comprising:

impregnating a metal oxide with a solution containing Pd and Zn; and burning the metal oxide that is impregnated with Pd and Zn.

- 8. The method according to elaims 6 or 7, wherein the metal oxide contains Ce oxide or Zroxide.
- 9. The method according to claims 6-or-7, wherein the impregnating step first impregnates the metal oxide with a Zn-containing solution and then impregnates the metal oxide with a Pd-containing solution.
- 10. The method according to claims 6 or 7, wherein a burning temperature used in the burning step is 400 to 600 °C.
  - 11. The method of claim 10, further comprising : reducing the metal oxide at 400 to 600  $^{\circ}$ C.
  - 12. A methanol reformer, comprising:

an inlet port of a gas;

a reaction vessel having the methanol reforming catalyst set forth in 35 claim 1 in its inside and causing a reforming reaction of a gas supplied from the gas inlet port; and

an outlet port of the gas reformed in the reaction vessel.

殿 送信元-MIYOSI & MIYOSI

13. A methanol reformer, comprising:

an inlet port of a gas;

a reaction vessel having the methanol reforming catalyst set forth in

5 claim 5 in its inside and causing a reforming reaction of a gas supplied from the gas inlet port; and

an outlet port of the gas reformed in the reaction vessel.

14. A methanol reforming apparatus, comprising:

the methanol reformer set forth in claim 12;

10 a methanol supply source;

an oxygen supply source;

a steam supply source; and

a pipe supplying methanol, oxygen, and steam, which are supplied from respective, supply sources, to the methanol reformer.

15. A methanol reforming apparatus, comprising:

the methanol reformer set forth in claim 13;

a methanol supply source;

an oxygen supply source;

a steam supply source; and

a pipe supplying methanol, oxygen, and steam, which are supplied from respective, supply sources, to the methanol reformer.

16. A fuel cell system, comprising:

the methanol reforming apparatus set forth in claim 14;

a fuel cell;

a pipe supplying a gas reformed by the methanol reforming apparatus to the fuel cell; and

a pipe supplying an oxygen-containing gas to the fuel cell.

17. A fuel cell system, comprising:

the methanol reforming apparatus set forth in claim 15;

a fuel cell:

a pipe supplying a gas reformed by the methanol reforming apparatus to the fuel cell; and

a pipe supplying an oxygen-containing gas to the fuel cell.
